Packaging Goals for Crystal Products

Crystal products are heavy, fragile, and often irregular. Wholesale packaging should protect the product, support efficient unpacking, and match the buyer's retail channel.

Four packaging goals

Prevent chips and breakage, control movement inside cartons, support retail presentation, and make labeling easy for inventory or fulfillment.

Protective Packaging Levels

Level	Typical method	Best suited to
Basic bulk protection	Individual wrap + grouped inner bag or divider	Small carvings, mini products, trial mixed lots
Standard export protection	Individual wrap + inner box + reinforced carton	Spheres, towers, medium carvings, regular wholesale orders
Premium retail-ready	Gift box or branded box + insert + label + export carton	Private label brands, gift shops, online sellers
Heavy / large piece protection	Foam cavity, custom inner box, double-wall carton, pallet if needed	Large spheres, large towers, decor, mineral specimens

Fragile points

Tower tips, mushroom stems, animal ears, wings, thin edges, and sphere stands need extra protection. Packaging should be designed around the weakest feature.

Retail-Ready Packaging Options

Format	Advantages	Suitable products
Clear bag + label	Low-cost, visible product, easy barcode application	Small carvings, bracelets, mini gifts
Kraft or printed box	Clean branding and better shelf presentation	Hearts, palm stones, carvings, gift sets
Window box	Shows product while maintaining retail packaging	Small decor and gift products
Drawer or magnetic gift box	Premium unboxing and high perceived value	Private label gift collections
Display tray or divider box	Efficient for retail shelves and mixed assortments	Mini carvings, small spheres, themed sets

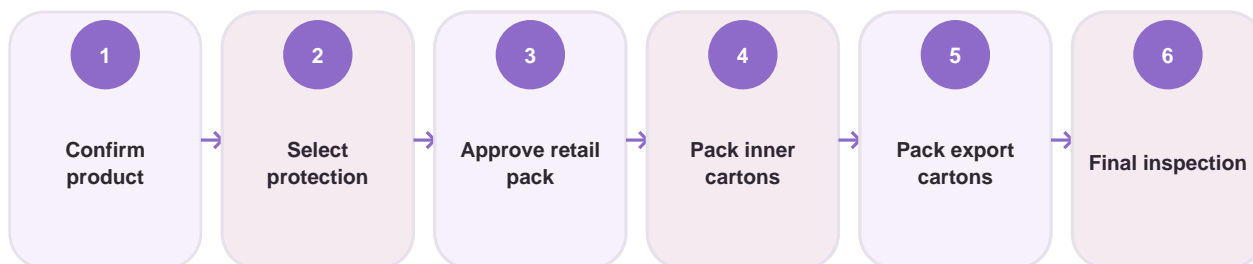

Private Label Elements

- **Logo label:** simple branded sticker or printed label applied to a bag, box, or product card.
- **Barcode / SKU label:** buyer-provided barcode data and SKU mapping for retail or warehouse use.
- **Insert card:** brand story, material description, care information, or collection message.
- **Printed packaging:** custom box artwork, color, finish, and structural format subject to packaging MOQ.
- **Carton marks:** PO number, SKU, quantity, carton number, gross / net weight, and destination marks.
- **Assortment labeling:** material name, size band, shape, or collection code for mixed-lot organization.

Artwork requirement

Supply vector artwork when possible, define print colors, confirm dimensions, and approve a digital proof or physical sample before mass production.

Export Packing Workflow

Checkpoint	What to verify
Product protection	No direct product-to-product contact where scratching or chipping may occur.
Void control	Carton contents should not move significantly during handling.
Carton strength	Carton grade should match total weight and shipping method.
Moisture protection	Use bags or desiccant where material or packaging requires it.
Carton information	PO, SKU, quantity, weight, carton number, and handling marks are correct.
Photo record	Take packing photos and final carton photos for buyer confirmation.

Packaging Information to Send for a Quote

- Product list, quantities, dimensions, and approximate weight
- Preferred packaging style or reference photos
- Logo file, color requirements, and artwork dimensions
- Barcode / SKU spreadsheet if labels are required
- Whether the product must be retail-ready on arrival
- Carton mark instructions and destination requirements
- Target budget for unit packaging
- Any drop-test, marketplace, or retailer-specific packaging requirement

Build a Retail-Ready Crystal Collection

Send us your packaging reference, product list, quantity, logo, and sales channel. We can recommend practical wholesale and private label packaging options.
