What Can Be Customized?

Custom crystal projects can range from a revised size or material to a fully developed carving, branded gift set, or private label collection.

- **Shape:** animal, character, symbol, logo-inspired form, geometric design, or buyer-supplied concept.
- **Material:** buyer-selected natural stone, acceptable material family, or coordinated mixed-material assortment.
- **Size:** target dimensions, size band, weight band, or multiple variants.
- **Finish:** polished, matte, partially polished, natural texture, or mixed finish where technically suitable.
- **Packaging:** retail box, gift box, label, barcode, insert card, assortment tray, or export-only packing.
- **Branding:** logo label, packaging print, collection name, SKU structure, or carton marks.

Custom Development Process

Stage	Buyer input	Supplier output
Concept review	Reference photos, drawing, target size, material, quantity	Feasibility feedback and clarification list
Quotation	Confirmed design direction and packaging scope	Unit price, tooling / sample cost if applicable, MOQ, schedule
Sample	Approval comments and acceptable variation	Physical sample or detailed sample photo / video
Bulk approval	Written sample approval and final order documents	Mass production based on approved standard
Pre-shipment	Inspection or photo requirements	Final inspection record, packing photos, shipment documents

Design Information to Provide

- Front, side, and back reference views where possible
- Target height, width, depth, and weight range
- Important details that must remain recognizable
- Areas that may be simplified for carving or polishing
- Preferred material and acceptable alternatives
- Surface finish and color expectations
- Quantity per version, color, or material
- Packaging and branding requirements
- Target market and required retail price level

Design reality

Natural stone has grain, inclusions, color variation, and carving limitations. A design may need adjustments to improve strength, polishing access, production consistency, or packaging safety.

Sample Approval Standard

Approval area	What to review
Overall silhouette	Does the product look recognizable and balanced from normal viewing distance?
Critical details	Are the required facial, symbolic, logo, or structural details acceptable?
Dimensions	Are target measurements and tolerances practical?
Material range	Does the sample represent an acceptable color / pattern range?
Polishing and edges	Are smoothness, point condition, base stability, and edge quality acceptable?
Packaging fit	Does the sample fit the approved retail and protective packaging?
Reproducibility	Can the approved design be repeated within the agreed handmade tolerance?

Approval record

Keep dated sample photos, measurements, comments, and packaging photos. These records reduce confusion during repeat orders.

MOQ, Schedule, and Cost Drivers

Cost driver	Why it matters
Material grade and yield	Natural stone blocks vary in usable yield, pattern, hardness, and internal defects.
Shape complexity	Fine details, undercuts, thin features, and polishing access increase labor.
Size and weight	Larger products use more material, require more labor, and increase freight cost.
Number of variants	Multiple sizes, materials, or packaging versions increase setup and management.
Packaging customization	Printed boxes, molded inserts, and low-volume artwork can add setup costs.
Inspection standard	Tighter tolerances and detailed sorting require more production control.

Quotation note

MOQ and schedule are confirmed after the design, material, size, quantity, and packaging scope are reviewed. Custom projects should not be quoted from a product name alone.

Custom Project Brief

Project / collection name: _____

Product shape or reference: _____

Material and acceptable alternatives: _____

Target dimensions and tolerance: _____

Estimated quantity: _____

Surface finish: _____

Packaging and branding: _____

Target market / price level: _____

Required sample or delivery timing: _____

Start a Custom Crystal Project

Send your reference images, dimensions, material preference, quantity, and packaging requirements. We will review feasibility and prepare the next steps.
