SIZE GUIDE

Wholesale Crystal Size Guide

How to specify sphere diameters, tower heights, carving dimensions, tolerances, and packaging requirements.

Why Size Specifications Matter

Crystal products are often photographed close-up, which can make them appear larger than they are. Wholesale buyers should confirm dimensions, weight, and acceptable tolerance before placing an order.

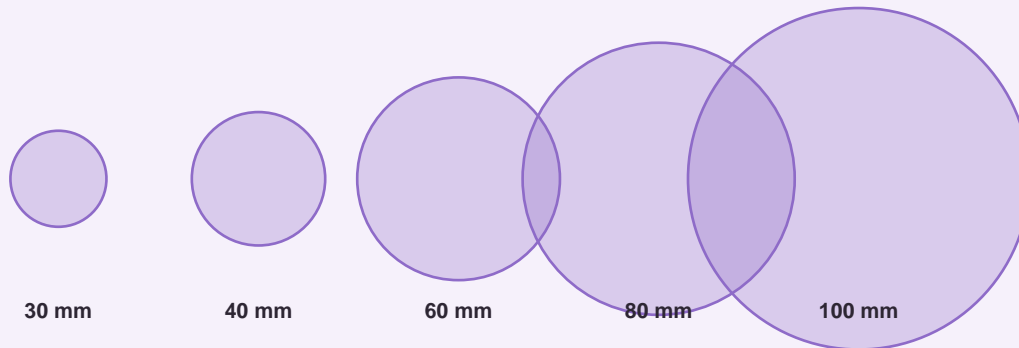

Use measured references

Ask for ruler photos, caliper photos, hand-held photos, and approximate weight. For spheres, diameter is the primary measurement. For towers, confirm height and base width.

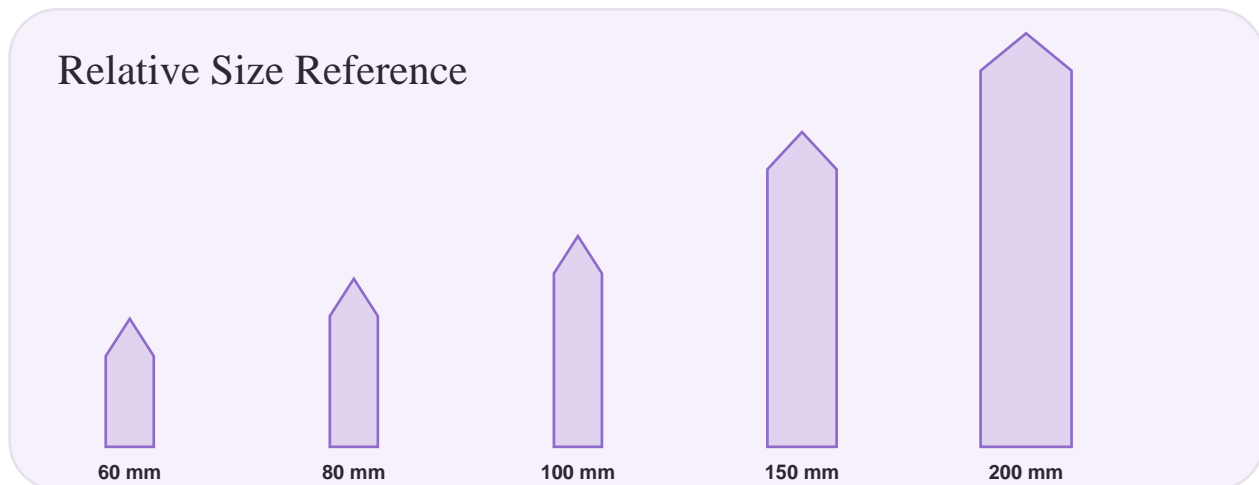

Sphere Diameter Reference

Relative Size Reference

Diameter range	Typical retail use	Packing notes
20-30 mm	Mini gifts, sets, display bowls, low-price add-ons	Can be packed in divided trays or small bags
35-50 mm	General retail, mixed material collections, gift sets	Good balance of cost, visibility, and shipping weight
55-80 mm	Premium display, collectors, online hero products	Individual protection and strong cartons recommended
90-120 mm	Statement decor, premium gifting, showroom display	Higher freight weight; accurate weight estimates required
150 mm and above	Large decor and special orders	Custom packing and freight planning required

Tower Height Reference

- **Mini towers:** commonly used in gift sets, grids, mixed material bundles, and entry-level retail displays.
- **Standard towers:** suitable for shelf merchandising, online product photography, and material collections.
- **Large towers:** stronger visual impact but higher packing risk and shipping weight.
- **Always confirm:** total height, base width, point condition, base stability, and weight range.

Carvings, Hearts, and Palm Stones

Product type	Dimensions to confirm	Commercial note
Animal / figure carving	Height x width x thickness	Shape complexity affects weight and carving detail.
Heart	Width x height x thickness	Confirm whether the heart stands, lies flat, or includes a display stand.
Palm stone	Length x width x thickness	Comfort and perceived value are influenced by thickness and polish.
Mushroom	Total height x cap width	Small caps and stems require careful packing.
Skull or symbolic carving	Height x width x depth	Request front, side, and back views for shape approval.
Freeform decor	Maximum height x width x depth + weight	Each piece may vary; sell by size band or weight band.

Caliper photos help confirm carving height and width.

Sphere diameter should be checked across the widest point.

Size Tolerance and Natural Variation

- Hand-polished and carved products may vary slightly from the nominal target size.
- Natural stone density varies, so pieces with similar dimensions may have different weights.
- Complex carvings can have wider dimensional variation than simple spheres or towers.
- Specify whether your order is sold by exact size, size range, weight range, or mixed assortment.
- For private label packaging, confirm the internal box size after product tolerances are approved.

Recommended quotation format

Example: 60 mm sphere, acceptable diameter 58-62 mm, mixed natural pattern, individual protective wrap, 48 pieces per export carton.

Size Information Checklist

- Product shape and material confirmed
- Target size and acceptable range confirmed
- Weight range requested when freight cost matters
- Ruler or caliper photos reviewed
- Base stability or standing requirement confirmed
- Packaging dimensions checked
- Carton quantity and carton weight estimated
- Sample approved before large custom production

Need a Custom Size Quotation?

Send your preferred dimensions, product type, material, quantity, and packaging method. We will confirm a practical size range and quotation.
